Letter from the President

JERRY J. FEDELE

At Boca Regional, we are starting off 2016 in grand fashion with the introduction of the Accuray CyberKnife® M6™ System with InCise2 technology. As our cover story conveys, this latest evolution in radiation therapy provides distinct clinical and patient advantages found in no other technology in medicine today. There are only two of these systems in the country — and one of them is at our Lynn Cancer Institute.

You will also read that the Hospital has earned yet another national accolade for its quality of care. The National Research Corporation has awarded us their coveted Consumer Choice Award for 2015–2016. We are the only hospital in Palm Beach County to earn such a distinction.

I would also draw your attention to the article on our Resident Physician Community Partnership Program. As the primary teaching site for Internal Medicine Residents from Florida Atlantic University's Charles E. Schmidt College of Medicine, we pride ourselves on our transformation from a capable community hospital to a true academic medical center. Yet our commitment transcends that of simply training tomorrow's clinicians. The Partnership Program is a unique initiative designed to acclimate these young doctors and their

families to our region. I invite you to learn more about it and consider becoming involved.

Other articles of interest will give you insights into the advances we are making in such areas as valvular disease and breast health. You'll also find useful information on our relationship with Northwell Health (formerly North Shore-LIJ Health System), our growing constellation of outpatient facilities and a list of our BocaCare® primary care physicians and specialists.

By any measure, 2015 was very special for Boca Raton Regional Hospital. I have no doubt that 2016 will again be a banner year and that we will continue to enhance our position as one of the premier providers of healthcare in the state of Florida.

Sincerely,

Jerry J. Fedele
President & CEO

Connect. Learn. Recover.

A MONTHLY STROKE SUPPORT GROUP AT THE MARCUS NEUROSCIENCE INSTITUTE

The Stroke Center at Boca Raton Regional Hospital offers education and supportive information for those who have experienced a stroke, as well as for their caregivers.

Join us monthly to learn more about community resources and listen to certified and/or licensed healthcare professionals discuss such stroke-related topics as side effects, recovery, diet, exercise and modifiable risk factors. The Stroke Support Group meets on the fourth Thursday of each month from 5:00pm to 6:30pm at the Marcus Neuroscience Institute Conference Room.

For more information about the Stroke Support Group or to RSVP, call 561.955.4282.

A COMMON
BOND

Boca Regional Garners Yet Another National Accolade

Boca Raton Regional Hospital has been cited as a 2015–2016 Consumer Choice Award recipient by the National Research Corporation (NRC). The annual accolade identifies hospitals across the United States that healthcare consumers choose as having the highest quality and image. Boca Regional now joins such prestigious institutions as the Hospital of the University of Pennsylvania, Massachusetts General Hospital and The Johns Hopkins Hospital in this year's listings, and is the only provider in Palm Beach County to receive the distinction.

Award recipients are determined by consumer perceptions on multiple quality and image ratings in NRC's Market Insights, the largest online consumer healthcare survey in the country. The survey includes more than 300,000 households in the contiguous 48

states and the District of Columbia. Hospitals named by consumers are ranked by their Core Based Statistical Areas as defined by the U.S. Census Bureau.

"We are most gratified to receive this significant, third-party distinction," said Jerry Fedele, President and CEO at Boca Regional. "It adds to our growing list of national accolades such as *U.S. News & World Report's* listing of us as a Top Ranked Regional Hospital. We are very proud to see our quality recognized in such outstanding fashion."

For more information, or a complete list of Boca Regional's awards and accolades, visit www.brrh.com/accolades.

Healthcare Away From Home

Boca Raton Regional Hospital has joined with Northwell Health (formerly North Shore-LIJ Health System) to encourage New York area residents with second homes in or near Boca Raton to enroll in Boca HealthLink Exchange, a program that enables healthcare providers to share medical records of patients served by Northwell and Boca Regional.

The service ensures that Northwell patients who travel south during the winter will experience the same level of world-class patient care and customer service in Florida. Patients who enroll in Boca HealthLink Exchange and pre-authorize the sharing of records can utilize a number of services from both organizations.

For more information, go to www.NY2Boca.com. Patients can enroll by calling 1.844.NY2.BOCA (692.2622).

Boca Raton Regional Hospital and GE Healthcare Join Forces to Tackle Breast Cancer

The Christine E. Lynn Women's Health & Wellness Institute (LWHWI) at Boca Raton Regional Hospital and GE Healthcare have announced a first-of-its kind agreement between these two leading institutions to advance breast healthcare. GE Healthcare has established the Institute as a national show site and identified the framework for developing a training Center of Excellence rooted in education and awareness around GE Healthcare's breast cancer screening and diagnostic technologies, care pathways and targeted outcomes.

Effectively combating breast cancer requires cutting-edge technology, dedication and experts across multi-disciplinary fields. LWHWI showcases GE Healthcare's most comprehensive set of advanced imaging tools for

detecting breast cancer in one clinical setting. As a national show site, its specialists and staff will welcome visitors from around the world to share insights into its own clinical protocols and expertise related to GE Healthcare's interconnected breast care solution.

"Being recognized as a GE Healthcare national show site is a testament to the dedication, training and expertise of our clinical staff to utilize advanced technology to better serve our patients," said Kathy Schilling, MD, Medical Director of LWHWI.

The training Center of Excellence is intended as a place for breast health providers to convene and benefit from best practice sharing, clinical expertise and technology leadership, all of which has the potential to positively influence

the delivery of healthcare within the region and across the U.S.

"The Christine E. Lynn Women's Health & Wellness Institute has shown a deep commitment to and shares our common goal of providing patients the most advanced personalized breast cancer care possible," said Lee Cooper, President and CEO, GE Healthcare, USCAN. "This agreement takes that commitment even further by amplifying their success at technology optimization, leadership development and accomplishments around clinical, operational and economic excellence, which we believe results in better patient outcomes."

For more information, call
561.955.4HER (955.4437).

All mammograms are done in SensorySuites™, where soothing videos and photos, natural sounds and calming fragrances are featured.

A COMPLETE SPECTRUM OF PERSONALIZED BREAST CARE SOLUTIONS

Cutting-edge technology offers patients the most comprehensive collection of imaging tools in the region:

- » Discovery™ 3T MRI, GE Healthcare's 750w Caring MR Suite
- » Discovery™ M750b, GE Healthcare's Molecular Breast Imaging Unit (MBI)
- » SenoBright™, GE Healthcare's Contrast Enhanced Spectral Mammography (CESM)
- » Lunar iDXA™ for Bone Health, GE Healthcare's Bone Densitometry
- » Proteus™ XR, GE Healthcare's Digital X-ray
- » Invenia™, Automated Breast Ultrasound System (ABUS) (see page 5)
- » GE Healthcare's SensorySuites™
- » SenoClaire™, GE Healthcare's Low-Dose 3D Breast Tomosynthesis

Breast Health Imaging Technology—

NO LONGER A ONE-SIZE-FITS ALL

The Christine E. Lynn Women's Health & Wellness Institute at Boca Raton Regional Hospital has added the GE Healthcare Invenia™ Automated Breast Ultrasound System (ABUS) to their spectrum of breast imaging capabilities.

The supplemental screening option provides extraordinary image performance, enhanced breast coverage and excellent detection for patients with all types of breast tissue.

Research has shown that utilizing the same breast health imaging technology for every woman is no longer optimum.

Differences in breast tissue require a variety of tools to maximize effectiveness and efficiency in screening mammography. ABUS is the only ultrasound device to be approved by the U.S. Food and Drug Administration as an adjunct technology that can be used in conjunction with mammography for breast cancer screening in asymptomatic women with dense breast tissue.

The Institute's physicians believe that using ABUS can help improve cancer detection by nearly 55 percent in patients with dense breasts. Common among women, dense breasts have more fibroglandular tissue than fatty tissue. Though cancer is more likely to develop in dense breasts, mammography may offer limited visibility.

"There is a dramatic paradigm shift in the approach to screening mammography that now recognizes the difference in women's breast

tissue and the clinical implications of those differences," said Kathy Schilling, MD, Medical Director of the Lynn Women's Health & Wellness Institute.

"The addition of ABUS now gives our Women's Institute every tool possible to customize our screening protocols per a woman's specific needs and detect breast cancer at its earliest and most curable stage."

To schedule an appointment or for more information, call 561.955.4HER (955.4437).

Boca Regional Introduces Fern F. Steinfeld Transcatheter Aortic Valve Replacement Center

Boca Raton Regional Hospital has established the Fern F. Steinfeld Transcatheter Aortic Valve Replacement Center. This latest component of the Hospital's Christine E. Lynn Heart & Vascular Institute provides a highly therapeutic treatment option for patients with symptomatic aortic stenosis and who are considered a high risk for standard valve replacement surgery.

Aortic valve stenosis is a type of heart disease in which the valve that regulates blood flow from the heart is narrowed and prevented from opening fully. Regrettably, many of these patients are of advanced age or have co-existing health issues that disqualify them for traditional valve replacement. Transcatheter Aortic Valve Replacement or TAVR is a minimally invasive surgical

technique that greatly reduces the procedural risk for these individuals.

TAVR delivers the artificial replacement valve through a catheter. Patients usually experience immediate benefit in terms of improved blood circulation. Because the valve replacement is done via minimally invasive technique, most patients can expect a much faster recovery period than they would from the conventional open-heart procedure.

The Center is led by Carlos A. Velez, MD, FACC, FSCAI, who serves as Director of Structural Heart Disease Interventions at the Christine E. Lynn Heart & Vascular Institute. Dr. Velez is a specialist in TAVR and has served on the faculty of some of the nation's most prestigious heart programs including those at Henry Ford Hospital in Detroit,

Michigan, Ochsner Medical Center in New Orleans, Louisiana and the Swedish Medical Center in Seattle, Washington.

"Dr. Velez brings impeccable credentials and experience to our TAVR Center," said Richard Cartledge, MD, FACS and Chief of Cardiovascular Surgery at Boca Raton Regional Hospital. "We, along with our patients, are most fortunate to have a clinician of his caliber heading this most important addition to our capabilities at the Lynn Heart & Vascular Institute."

For more information on Transcatheter Aortic Valve Replacement and other heart procedures, call 561.955.4282.

Transcending the Training of Tomorrow's Clinicians

THE RESIDENT PHYSICIAN COMMUNITY PARTNERSHIP

When Boca Raton Regional Hospital opened its doors to the first class of Internal Medicine Residents from Florida Atlantic University's Charles E. Schmidt College of Medicine in July of 2014, the welcoming extended well beyond the halls of the Hospital. Dozens of local civic-minded individuals joined together to create The Resident Physician Community Partnership, a unique program providing social support and mentorship to our medical residents and their families.

Graduate Medical Education is a demanding experience for residents. Many of these young men and women come to Boca Raton, where they and their families find themselves in unfamiliar surroundings. This factor, coupled with their arduous schedule and the responsibilities of a residency, can be especially burdensome. The Partnership was designed to provide assistance to residents at Boca Regional and help them acclimate to life in South Florida.

Amid increasing demand for medical care in our region, especially primary care, The Partnership aims to foster an environment of support that goes beyond the residents' training and helps to create and nurture a special relationship that can have a positive influence on their decision as to where they will ultimately choose to care for patients.

The Partnership connects a diverse group of community leaders and professionals to Boca Regional's medical residents and maintains an ongoing relationship with them.

In the final analysis, The Partnership is truly a win-win for everyone involved. The community has come forward to support these talented physicians and the residents have embraced and benefitted from this extraordinary endeavor.

For more information about The Partnership, please contact theresidencyproject@gmail.com.

Toledo Rockets Visit Boca Raton Regional Hospital

As part of the festivities surrounding this year's Marmot Boca Raton Bowl, players and Head Coach Jason Candle from the Toledo Rockets visited Boca Raton Regional Hospital's Toppel Family Place. There they met our new moms and dads, saw newborns in the nursery and learned about the maternity unit from our doctors, nurses and staff. On hand to welcome these athletes and exceptional young men was Boca Regional President and CEO, Jerry Fedele. Everyone enjoyed our time with the Rockets...and 2015 Marmot Boca Raton Bowl champs.

IN THE FIGHT AGAINST CANCER,

this is a tumor's worst enemy

Boca Raton Regional Hospital Becomes Only Second Site
in U.S. to Offer New Radiation Oncology Technology

Offering new hope to patients with tumors that were once considered untreatable with surgery or conventional radiation therapy, the Eugene M. & Christine E. Lynn Cancer Institute (LCI) at Boca Raton Regional Hospital is now utilizing the Accuray CyberKnife® M6™ System with InCise2 technology. Boca Regional now joins the renowned Hillman Cancer Center at the University of Pittsburgh Medical Center as the only two oncology programs in the country to offer this specific therapy.

Unlike other forms of radiosurgery, this latest generation of the CyberKnife offers an unprecedented ability to precisely target tumors while sparing damage to surrounding healthy tissue.

What makes this version of the CyberKnife so unique — and so effective — is its ability to continuously track and attack the tumor as it shifts during therapy due to patient movement or respiration.

“The InCise2 technology uses what is called a Multileaf Collimator and 3D robotic navigation which allow us to sculpt and re-sculpt the field of radiation we are delivering throughout the procedure and automatically correct for any tumor movement,” said Tim Williams, MD, Medical Director of Radiation Oncology at LCI. “With other systems, when the tumor moves you have to stop the radiation, wait for the mass to return to its original position, and then restart the therapy.”

This combination of exquisite accuracy and the ability to adjust to tumor motion allows the radiation therapy team to carry out the procedure with the highest level of precision. The System's advanced maneuverability also offers complete access and coverage for any tumor size or shape, even in anatomically difficult areas. In turn, these capabilities enable the delivery of higher radiation doses resulting in a reduced number of total treatments and a reduction in the individual treatment time from 60 minutes or more with prior versions of the CyberKnife to less than 30 minutes with the M6 InCise2 technology. Therapy is usually completed in one to five days versus weeks with more conventional radiation systems.

"This generation of CyberKnife is truly the state-of-the-art in radiation therapy," commented Dr. Williams. "In addition to its tremendous efficacy, the procedure requires no anesthesia, no recovery time, no overnight hospital stay and no restrictive positioning devices that are used in other technologies. As you can imagine, these are all tremendous patient and family satisfiers."

Dr. Williams noted that the CyberKnife at LCI is presently being used to treat malignant and non-malignant tumors of the prostate, lung, brain, spine, liver, pancreas, kidney, bone and eye. Even if patients have already undergone radiation, surgery or chemotherapy — or are currently undergoing treatment — they still may be candidates

for the CyberKnife system and should consult their physician. It is covered by most insurance plans.

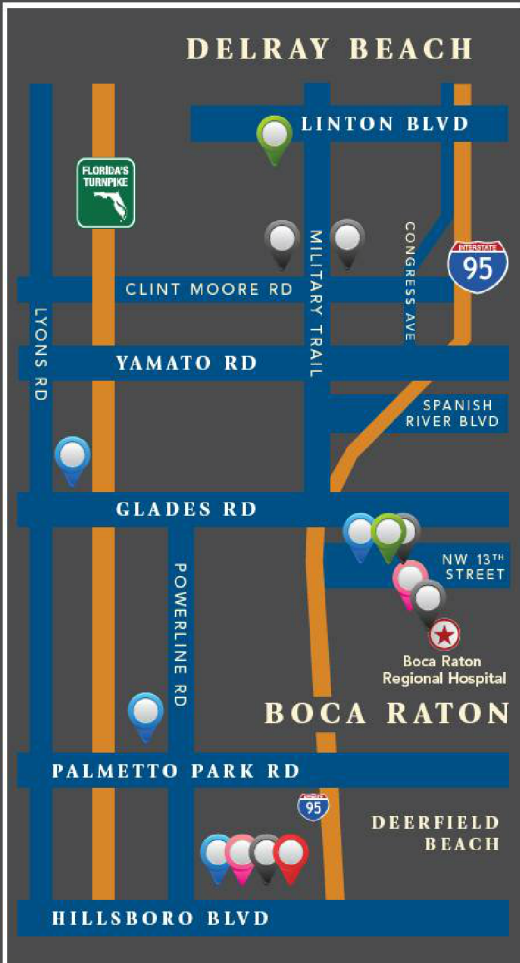

"CyberKnife now completes a spectrum of therapies at the Lynn Cancer Institute that is among the most sophisticated in the country," commented Dr. Williams. "Patients in the region should feel most confident in these capabilities and the benefits we can afford them in their treatment needs."

For more information about Lynn Cancer Institute's CyberKnife® M6™ System with InCise2 technology, call 561.955.4000.

Orthopedic Institute

AT BOCA RATON REGIONAL HOSPITAL

Boca Raton Regional Hospital's Orthopedic Institute offers the most sophisticated and innovative care in a variety of sub-specialties, including arthritis treatment, hip and knee replacement, spinal surgery, shoulder surgery and sports medicine. The dedicated team of physicians, nurses, physical therapists and other healthcare professionals is focused on improving the lives of patients by alleviating pain, promoting speedy recoveries and returning patients to a state of independence.

The Orthopedic Institute provides state-of-the-art total knee replacement and minimally invasive surgical techniques like anterior hip replacement, which provides patients with a faster recovery,

less pain and enhanced mobility. The Institute specializes in hip arthroscopy, a surgical procedure that gives doctors a clear view of the inside of a hip joint to better diagnose and treat hip problems.

Its advanced preoperative navigation system gives surgeons added precision in the operating room. Pain management protocols and a team approach to care are considered best practices in the field. All in an orthopedic unit that features private rooms with patient amenities such as flat-screen TVs and WiFi.

Deerfield Outpatient Center and Urgent Care Center

NOW OPEN IN BROWARD COUNTY

Access to the high quality of medical care synonymous with Boca Raton Regional Hospital just got easier for residents of Broward County. At Boca Regional's new Outpatient Center – Deerfield, patients will receive specialized treatment in orthopaedics, primary care, women's health, imaging and urgent care.

The beautiful new 25,000 square-foot facility is located at 3313 W Hillsboro Boulevard in Deerfield Beach, convenient to residents of Deerfield and Parkland. In addition to all of the onsite services available, the Center also links patients to the nationally-

recognized programs at Boca Regional should they have a condition that requires hospital-based care.

When non-emergency medical attention is required, the Urgent Care Center located inside the facility is prepared to handle everything from coughs, fevers and other minor ailments to laceration repair/stitches, wound care and partial casting/splinting.

"Our Hospital is enthused about the opportunity to be extending our services to the residents of north Broward County in this manner," said Jerry Fedele, President and CEO of Boca Raton Regional Hospital.

"We are most confident they will find the Outpatient and Urgent Care Center an attractive setting in which to receive the finest care possible."

 For additional information on Boca Raton Regional Hospital Outpatient Center – Deerfield, visit www.brrh.com/outpatientcenter.

BocaCare[®], Boca Regional's primary care physician network, is dedicated to providing you with exceptional medical treatment in a truly patient-centered environment. Our approach to your care focuses on three key components: time, touch and team.

TIME. Not only do we have same-day appointments and in-office labs, X-rays, bone density and ultrasound, but we also feature fast-track "Quick Care" service for patients with less severe illnesses that can be readily diagnosed and treated during office visits.

TOUCH. We believe caring for you means showing you we really do. That's why we have greeting areas instead of sliding-glass partitions. Moreover, you will always be referred to by name — not as "the patient in room three."

TEAM. Our unique team approach and interoffice communication system minimizes wait time in rooms and maximizes time with nurses and physicians. No gaps. No waiting. Just a seamless transition of caregivers during your visit. It's what makes BocaCare distinctive.

Raising The Bar

PHILANTHROPY MAKES AWARD-WINNING SERVICES POSSIBLE

The community's rich tradition of philanthropy continues to make Boca Regional's amazing growth and award-winning programs possible. As a not-for-profit institution, the Hospital's level of care and transformation would simply not be possible in today's healthcare environment without the generous support of the community.

Recently, the Foundation utilized gifts to fund patient care services, such as the world's smallest microscope, enabling physicians to see individual cells during endoscopies, allowing them to examine suspicious areas

without invasive surgery; programs, services and equipment for the Marcus Neuroscience Institute; construction of the new Christine E. Lynn Women's Health & Wellness Institute and the Gloria Drummond Physical Rehabilitation Institute; the CINDY Program for terminally ill patients and their families at the Eugene M. & Christine E. Lynn Cancer Institute; the CyberKnife® M6™ with InCise2 technology, the newest generation of radiation technology; the minimally invasive robotic surgery program; clinical research programs and scholarships for nurses and medical students.

In addition, support for the Hospital's signature events, including the Annual Go Pink Luncheon, Annual Golf Tournament and Annual Hospital Ball, raised almost \$2 million this past year.

Gifts are used to enhance patient care programs and services, purchase new technology and recruit the finest physicians, and every dollar stays right here to benefit the community.

To find out how your gift will truly make a difference, please contact the Foundation at 561.955.4142. All of us at Boca Regional, our patients and their families, thank you for your generosity and compassion.
